
Environmentally-friendly transport initiatives in Christchurch

Greenwood Roche assisted Christchurch City Council in launching and supporting the city's recent environmentally-friendly transport initiatives intended to support sustainable multi-modal journeys, and complement and enhance the region's existing public transport network.

The initiatives comprise the introduction of the shared electric car fleet with Yoogo, a proposed public bike share system, and Lime's e-scooters.

Christchurch City Council has partnered with a range of leading public and private sector organisations with a view to promoting the physical health of its residents, reducing the negative impacts that traditional transport options have on the environment, and reducing the number of cars on Christchurch roads.

Greenwood Roche's team, led by James Riddoch, worked with Christchurch City Council to prepare the legal framework to support these projects, including advising Council on procurement matters, negotiating the commercial terms with the suppliers, and advising Council in relation to the required permits to allow these businesses to operate in the city.
