
Bathurst Resources – Buller Coal Project

New Zealanders are well aware of the severe challenges Bathurst Resources has overcome in progressing its West Coast coal mining project.

Greenwood Roche has been part of the Bathurst team on some important parts of the Buller Project, advising on land acquisition and land rights for the coal handling and preparation facility and the proposed aerial conveyer, and obtaining requisite Overseas Investment Office approvals.

We have also been acting jointly for Bathurst Resources and Westport Harbour on their joint arrangements for the siting, construction and operation of a coal handling facility at Westport Port.
