
New Paraparaumu Substation

Transpower New Zealand Limited recently commissioned the new 220 kV substation at Paraparaumu, providing additional electricity capacity to the Kapiti Coast.

Greenwood Roche advised Transpower on the property rights required for the new 220kV transmission lines to connect the substation to the existing electricity grid, and on the removal of the existing 110kV lines running from Paraparaumu along the proposed route of the Transmission Gully Motorway.
